

Simple adjustments to be made to UI:

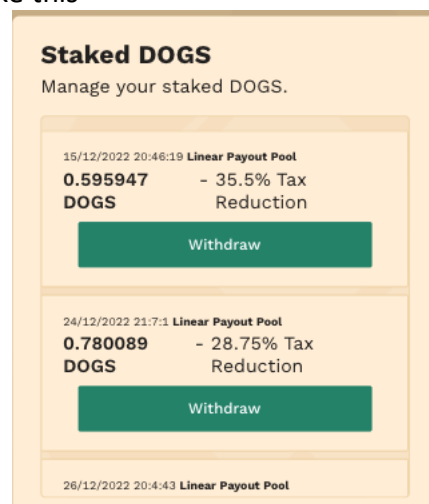

1. Copywrite should be updated to reflect whatever year we are in.
  - a. Script –

```
<script>
  let date = document.write(new Date().getFullYear());
  `<h2>${date}</h2>`
</script>
```

2. Mobile quires should be done to adjust the UI for screen size. Ie- mobile friendly

- a. To something like this

This can be done for multiple device sizes ie – iphone 12 Pro has a screen size of 390 x 844. So a `@media screen and (min-width: 390px) and (device-height: 844px) {`  
`// custom css here`  
`}`
